## **Adeneo Embedded demonstrates its expertise on Silverlight for Windows Embedded and Windows Embedded CE 6.0 R3**

*Adeneo Embedded collaborates with Microsoft and Infragistics to deliver Consumer Internet Device (CID) user experience demonstration based on Windows Embedded CE 6.0 R3 and Silverlight*

**Boston, MA (USA), October 8th, 2009** – Adeneo Embedded, a Windows Embedded Gold Partner with engineering offices located in Europe and North America, presented its Consumer Internet Device (CID) user experience demonstration at the Embedded System Conference (ESC) in Boston. The CID demo was developed in collaboration with Microsoft and Infragistics, a Microsoft Gold Certified Partner.

This demonstration showcases advanced graphical possibilities of the Silverlight for Windows Embedded user interface framework running on Windows Embedded CE 6.0 R3 and bringing a new revolution in user experience with embedded devices.

Through its direct collaboration with Microsoft and Infragistics to prepare this demonstration, Adeneo Embedded showcased its expertise in development and system integration with Windows Embedded, both on BSP and driver development, and also for application level development, using advanced development environment and technologies like Silverlight for Windows Embedded and Microsoft Expression Blend, and brings OEMs one step further to secure rich user experiences with embedded devices.

“We’re very proud that Microsoft selected Adeneo Embedded for the development of this demonstration showcasing advanced features of the newly released Windows Embedded CE 6.0 R3”, says Yannick Chamming’s, CEO of Adeneo Embedded. “By engaging very early on new technologies

like Silverlight for Windows Embedded and Microsoft Expression Blend, Adeneo Embedded is now able to secure top level expertise and support to OEMs adopting these new technologies.”

“We’re excited to support Adeneo Embedded and Infragistics to offer OEMs the opportunity to utilize the componentized, real-time Windows Embedded CE 6.0 R3 operating system as well as new Silverlight and Microsoft Expression Blend technologies,” said David Wurster, senior product manager for the Windows Embedded Business at Microsoft. “By leveraging rich application experiences, Windows Embedded CE 6.0 R3 assists OEMs in redefining the user experience and delivers connectivity to Windows 7-based PCs, servers and online services,”

**About Adeneo Embedded**

Adeneo Embedded provides system integration, design, support and training services to companies seeking world-class expertise in embedded solutions using high-performance architectures. For over 10 years, Adeneo Embedded has helped clients, in all stages of development; create profitable, feature-rich products that incorporate software and hardware solutions based on Windows Embedded and Windows Mobile,. Close working partnerships with industry-leading silicon and software vendors allow Adeneo Embedded to apply its experience to a wide range of embedded solutions for the automotive, industrial, medical, multi-media, navigation, networking, mobile and wireless markets. Adeneo Embedded has a global sales and support network backed by engineering offices in North America and Europe.
